XB Software

We have successfully completed over 100 projects in 20+ countries across the globe. The majority of our clients reside in the United States, Canada and the European Union.
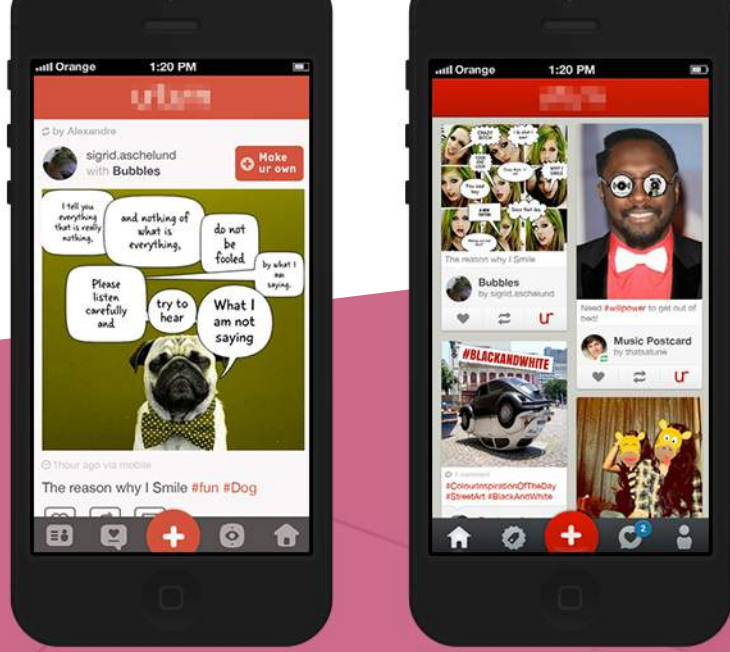

Social Platform

Social platform with a variety of media content, namely: music, photos, photo editor. The main purpose of this platform was to join or supplement the existing accounts in various social networks.

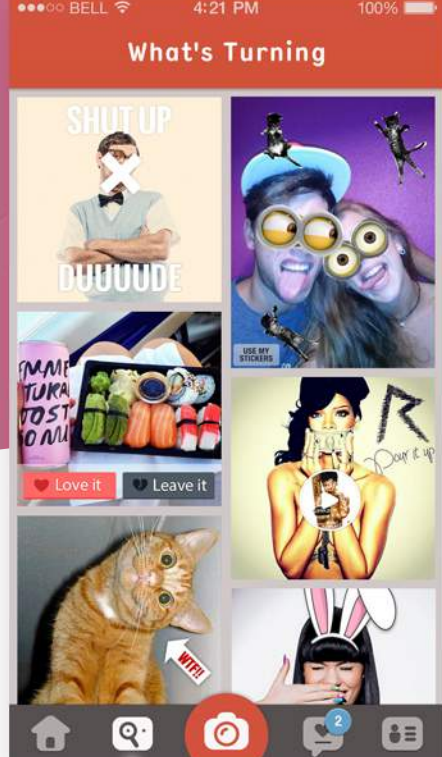

Challenges for QA team

We had to test support of a large number of users. It was important to check not only the stability of the app operation at high loads, but also the response speed.

The team was challenged to check the app on a large number of mobile devices and how it syncs with various social networks.

A big built-in photo editor with the preset templates for editing photos and creation of collages demanded thoroughful testing of various logical connections in the app.

Types of software testing

• Requirements testing

• Integration testing

• System testing

• UI testing

• Stress testing

• Load testing

• Mobile testing

• Usability testing

• Creation of test documentation

• Cross browser and multiplatform testing

Provided documents and reports

• Test plan

• Check list for web service

• Check list for mobile app

• Test cases

• Use cases

• Test reports

• Load report following each new version release

• Recommendations on improvements based upon each sprint

Team engaged

1 QA team lead, 2 QA engineers

Duration

4000 man-hours

Project type

Web service and mobile app, apk

Tools and Platforms

Tools: Jira, Google Docs, JMeter

Platforms: Windows, Android, iOS

Testing results

Multiuser crossbrowser and crossplatform app with integration in multiple social nets.

Handy and intuitive interface.

App working flawlessly during many years of work and enjoying high demand in its field.

Thanks for watching!
